

JST	Chair	March 9	
13:10-13:20	Watanabe	<b>Gotoh Toshiyuki</b>	<i>Opening</i>
13:20-13:40		<b>Shaw Raymond</b>	<i>Relative roles of mean and fluctuating supersaturation in cloud formation</i>
13:40-14:00		<b>Tajiri Takuya</b>	<i>MRI adiabatic-expansion-type cloud chamber experiments: CCN and INP abilities of atmospheric aerosol particles measured at Tsukuba, Japan</i>
14:00-14:20		<b>Yang Fan</b>	<i>Comparison of large-eddy simulations of a convection cloud chamber using various microphysics and advection schemes</i>
14:20-14:40		<b>Krueger Steven</b>	<i>Supersaturation variability in clouds and in the Pi Chamber</i>
14:40-14:45	<i>Break</i>		
14:45-15:05	Krueger	<b>Grabowski Wojciech</b>	<i>Impact of turbulence on CCN activation and early growth of cloud droplets</i>
15:05-15:25		<b>Chen Sisi</b>	<i>Understanding cloud-aerosol-turbulence interactions in warm and mixed-phase clouds: DNS approach and application</i>
15:25-15:45		<b>Kumar Bipin</b>	<i>Direct numerical simulations of CCN activation: response to particle characteristics</i>
15:45-16:05		<b>Hoffmann Fabian</b>	<i>The importance of small-scale dynamical processes for aerosol-cloud interactions</i>
16:05-16:10	<i>Break</i>		
16:10-16:30	Xu	<b>Bagheri Gholamhossein</b>	<i>The Max Planck CloudKite (MPCK): airborne measurement of cloud microphysics and turbulence</i>
16:30-16:50		<b>Molacek Jan</b>	<i>In situ measurements of cloud droplet clustering at Zugspitze</i>
16:50-17:10			<i>Discussion</i>
JST	March 10		
13:00-13:20	Gotoh	<b>Sreenivasan Katepalli Raju</b>	<i>Special lecture Three comments (loosely) related to clouds</i>
13:20-13:40		<b>Yeung, P.K.</b>	<i>Stokes point-particle dynamics: small-scale turbulence structure and contrast between forward and backward dispersion</i>
13:40-14:00		<b>Ishihara Takashi</b>	<i>DNS data analysis of the collision processes of inertial particles in high Reynolds number turbulence</i>
14:00-14:20		<b>Kobayashi Hiromichi</b>	<i>A Langevin model for gradients of passive scalar in isotropic turbulence</i>
14:20-14:40			<i>Break</i>
14:40-14:45	<i>Break</i>		
14:45-15:05	Meiburg	<b>Xu Haitao</b>	<i>Experimental study of droplet motion in a plane traveling wave</i>
15:05-15:25		<b>Tsuji Yoshiyuki</b>	<i>Small particles motions in super fluid turbulence</i>
15:25-15:45		<b>Watanabe Takeshi</b>	<i>On the behavior of microbubbles in isotropic turbulence</i>
15:45-16:05		<b>Gorokhovski Mikhael</b>	<i>“Intuitive” models of a droplet in the under-resolved turbulence: breakup, dispersion and evaporation.</i>
16:05-16:10	<i>Break</i>		
16:10-16:30	Gorokhovski	<b>Pumir Alain</b>	<i>Settling and collision of ice crystals in turbulent clouds</i>
16:30-16:50		<b>Meiburg Eckart</b>	<i>Aggregation of cohesive particles in homogeneous isotropic turbulence</i>
16:50-17:10			<i>Discussion</i>
JST	March 11		
13:00-13:20	Ishihara	<b>Onishi Ryo</b>	<i>Microscopic simulations of cloud particle growth</i>
13:20-13:40		<b>Chandrakar Kamal Kant</b>	<i>Supersaturation variability from scalar mixing: evaluation of a new subgrid-scale model using direct numerical simulations of turbulent Rayleigh-Bénard convection</i>
13:40-14:00		<b>Lu Chunsong</b>	<i>Interactions between entrainment-mixing mechanisms and cloud droplet spectral width</i>
14:00-14:20		<b>Yin Chongzhi</b>	<i>Simulation of drizzling marine stratocumulus using the super-droplet method: numerical convergence and comparison to a double-moment bulk scheme</i>
14:20-14:40		<b>Shima Shin-Ichiro</b>	<i>Three-dimensional simulation of a cumulonimbus using the super-droplet method: first preliminary results</i>
14:40-14:45	<i>Break</i>		
14:45-15:05	Shima	<b>Rosa Bogdan</b>	<i>Numerical modeling of dispersed turbulent flows considering particle-scale interactions</i>
15:05-15:25		<b>Arabas Sylwester</b>	<i>Supercooling super-droplets: on particle-based modelling of immersion freezing</i>
15:25-15:45		<b>Schumacher Jörg</b>	<i>Extreme vorticity events in turbulent Rayleigh-Bénard convection from stereoscopic particle image velocimetry and recurrent neural networks</i>
15:45-16:05		<b>Bodenschatz Eberhard</b>	<i>Cloud microphysics metrology applied to human drops and aerosols</i>
16:05-16:25		<b>Gotoh Toshiyuki</b>	<i>Statistical properties of supersaturation fluctuations in cloud turbulence</i>
16:25-16:45			<i>Discussion and Closing</i>

**Time Table of Workshop (20 min =15 +5)**

**Time is in Japan Standard Time**
